PROJECTS

React and Node Projects

As an essential member of the team, I played a pivotal role in crafting the APIs for these projects, while also actively contributing to both frontend and backend development using React and Node.js within a monorepo environment.

React Projects to create some packages

As a valued member of the team, I contributed to the development of custom React packages tailored for monorepo environments. These packages encompassed functionalities such as internationalization with react-i18next, layout management with react-layout, user management with react-user, and configuration management with react-config. Additionally, I played a key role in the creation of various other utilities aimed at enhancing development efficiency.

React Projects

I led front-end development for these projects with a team, using React, TypeScript, and Tailwind CSS to create a smooth user experience. I integrated REST APIs and GraphQL for seamless functionality and built API endpoints with Node.js to support the backend.
